

BURLY™ COMFORT II®

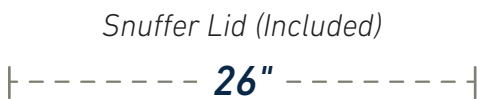

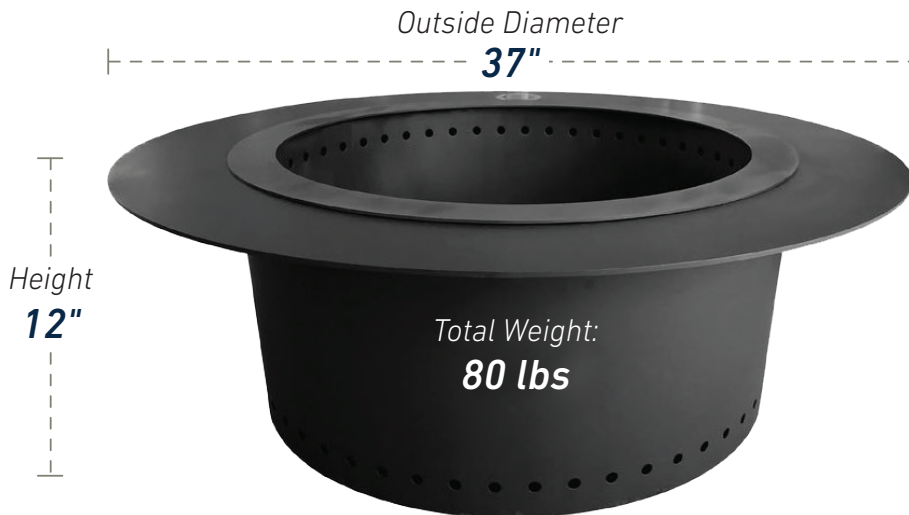

24" FIRE PIT INSERT

FITS ASPEN STONE® FIRE PIT
*SOLD SEPERATELY

HOW IT WORKS

Our fire pits are designed with double wall technology and an engineered airflow system. Air enters the holes at the base surround of the fire pit and begins to rise as the inner wall heats up. The raised vented cross bars enable oxygen to feed the fire even as ash builds up. As hot air is forced between the walls of the two units, it begins to circulate beneath our specially designed flange. These holes introduce oxygen back into the fire and excess smoke is burned off, leaving an almost smoke-free experience.

ASPEN STONE® FIRE PIT KIT:

Outside Diameter
42"

Inside Diameter
28"

BURLY™ COMFORT® II

24" FIRE PIT INSERT

FITS ASPEN STONE® FIRE PIT
