Beautifully Placed Confidence

AS A FAMILY-OWNED BUSINESS, EAGLE BAY OPERATES ON A UNIQUE SET OF VALUES. TRUST MEANS EVERYTHING TO US, AND WE EARN IT BY OFFERING THE FINEST PRODUCTS AND SERVICES. WE UNDERSTAND THAT WE'RE NOT JUST MAKING HARDSCAPE PRODUCTS; WE'RE CREATING PEACE-OF-MIND.

For any outdoor landscape, pavers add visual interest, function and substance. They enhance both intimate and extravagant areas, complement traditional and modern aesthetics and serve small and large budgets. In this issue, Eagle Bay presents four distinct paver collections so you can easily choose a paver with the finish and pattern that best matches your unique style.

PAVERS

Insignia

COLLECTION

The Insignia Collection is a grouping of Eagle Bay's most popular pavers that best achieves a natural and organic feel. All pavers in this collection have a textured surface, mimicking weather aging and naturally produced stone.

- CHATHAMSTONE
- COTTAGESTONE TEXTURED
- ESSEXSTONE

ChathamStone, Jefferson

finishing tip:

FOR ADDED SEATING AROUND YOUR PATIO, INCORPORATE AN EAGLE BAY
HIGHLAND STONE® FREESTANDING WALL

JEFFERSON

RICHMOND

AVAILABLE COLORS

ChathamStone

ChathamStone is a large, three-piece paver combination that creates an elegant tile-like surface for patios, walkways, and poolsides. Although recently introduced, ChathamStone is quickly becoming one of Eagle Bay's most sought after pavers.

ChathamStone, Jefferson; Wall: Highland Stone® Freestanding Wall; Cap: XL™ Cap, Jefferson

CottageStone Textured, Shenandoah

CottageStone

TEXTURED

Available in either a 6" x 6" square or a 6" x 9" rectangle, CottageStone Textured offers a multitude of hardscape pattern opportunities. With its dimpled-face-finish, CottageStone Textured will make your final design convey artisan creation and perfect imperfections.

CottageStone Textured, Chesapeake & Blue Ridge

AVAILABLE COLORS

*Available in 6" x 9" only

EssexStone

EssexStone is Eagle Bay's natural slate alternative. The three-piece system fits together in a combination of interesting angles and is designed to create a unique and stunning hardscape.

AVAILABLE ONLY IN JEFFERSON COLOR, AS SHOWN.

EssexStone, Jefferson; Wall: Highland Stone® Freestanding, Crimson (Crimson available by special order only); Cap: XL™ Cap, Crimson

For EssexStone installation tips, visit eaglebayusa.com.

GrandCay

TEXTURED

Bring style to your poolside, patio, or driveway with GrandCay's popular five-piece paver system. The textured finish will give your project dimension and the variety of paver colors available can lead to bold and interesting patterns.

AVAILABLE COLORS

CircleStone Stone Textured, James River; CottageStone Textured, James River 6" x 6" & Chesapeake 9" x 9" (Chesapeake 9" x 9" is special order only)

CircleStone Textured, Blue Ridge; Chatham Stone, Jefferson

CircleStone

TEXTURED

CircleStone is a five-piece paver system, available in numerous colors, that complements Eagle Bay's entire product line. Use it to provide intimate and unique focal areas for both large and small spaces.

AVAILABLE COLORS

View larger color swatches on page 76-77.

Classic

COLLECTION

Eagle Bay's Classic Collection features traditional paver shapes, patterns, and color combinations that match the sophistication of their homeowners. The collection is timeless and is sure to endure as styles change and evolve.

BRIKSTONE CHAMFERED
BRIKSTONE FLAT COLONIAL
COTTAGESTONE CHAMFERED
KINGSLAND TRADITIONAL

BrikStone Chamfered, James River

BrikStone

CHAMFERED

Versatile in color and application, BrikStone Chamfered has become the top choice of many designers. The single stone, featuring beveled edges, can create classic patterns such as basket weave, running bond, and herringbone.

BrikStone Chamfered, James River & Sahara (Sahara is available by special order only)

AVAILABLE COLORS

RICHMOND

SHENANDOAH

JAMES RIVER

AVAILABLE COLORS

CottageStone Chamfered, James River

CottageStone

CHAMFERED

Modeled after Brownstone squares and rectangles, CottageStone Chamfered is crafted in 6" x 6" and 6" x 9" shapes. The beveled edges add dimension and maturity to your project and give it a Georgetown elegance.

KingsLand Traditional, Shenandoah, Edging: CottageStone, Shenandoah

KingsLand

TRADITIONAL

This three piece modular system is ideal for high traffic areas, yet maintains charm and warmth with its rounded edges. The pattern possibilities are endless and designers will often contrast colors to create dynamic curb appeal.

KingsLand Traditional, Jefferson; Columns: Highland Stone®, Chesapeake; Column Cap: Flat Rock Face, Gray; FirePit: Highland Stone®, Jefferson

finishing tip:

INCORPORATE AN EAGLE BAY FIRE PIT INTO YOUR PATIO PLAN TO ADD WARMTH ON COOL AUTUMN DAYS

AVAILABLE COLORS

Old World

COLLECTION

Eagle Bay's Old World Collection exudes warmth and richness for designs that seek to accomplish an aged and slightly rustic feel. And as is with all Eagle Bay pavers, you won't need to compromise durability for beauty with this collection.

COTTAGESTONE ANTIQUED
EPICSTONE COBBLED
GRANDCAY COBBLED
KINGSLAND ANTIQUED
CIRCLESTONE ANTIQUED

CircleStone

ANTIQUED

CircleStone Antiqued has been treated to provide your hardscape design with a vintage quality. This five-piece system can complement most any project by creating a focal point for gathering areas.

Bay

COLLECTION

Our signature Bay Collection can satisfy your design aesthetics along with your desire to limit your footprint. These Eagle Bay pavers significantly help filter contaminants and reduce runoff. We are proud to say this is a win-win for homeowners and our natural landscape.

ECOBAY
SF RIMA™ CHAMFERED
TURFSTONE TEXTURED

EcoBay, James River

EcoBay

With their traditional shape, EcoBay permeable pavers can fit nearly any design. Unlike traditional stone or pavers, this two piece system will effectively reduce the amount of runoff that can pollute our streams, lakes, rivers and ultimately the Chesapeake Bay.

EcoBay, James River

For more information about stormwater management with permeable pavers visit eaglebayusa.com

AVAILABLE COLORS

JAMES RIVER

CHESAPEAKE

SF Rima™ CHAMFERED

SF RIMA™ is a single-unit permeable paver with a flat face and beveled edges. It is a durable paver that can withstand heavy traffic, making it well-suited for a variety of hardscape and storm water solutions.

SF RIMA™ Chamfered, Chesapeake

JAMES RIVER

CHESAPEAKE

AVAILABLE COLORS

View larger color swatches on page 76-77.

TurfStone

Turfstone can be a visual feature in your hardscape or serve a more functional role. It has a honeycomb shape that can be filled with gravel or grass. This allows rainwater to filter through slowly and evenly, resulting in the remediation and stabilization of soil erosion.

AVAILABLE ONLY IN GRAY COLOR, AS SHOWN

TurfStone, Gray

Eagle Bay walls add structure, protection and decoration to your hardscape. Our products are tested for strength and durability, and we have perfected a collection of color blends so you don't have to compromise on style. For each wall unit, columns and caps are available.

WALLS

Dublin™

FREESTANDING

Dublin™ mimics century-old boundary walls found throughout Dublin, Ireland. These tumbled stones add charm to any hardscape project. The same single unit is used for the wall, column, and caps, making estimating and assembly a snap.

Dublin™ Freestanding, Tan

Dublin™ Freestanding, Tan

AVAILABLE COLORS

Pulling all the pieces together for your future hardscape project can be intimidating. *Where to start?*

In this section we provide additional information that will get you closer to your dream design: colors, measurements, patterns, and more.

RESOURCES

PAVER COLORS

Selecting a paver color is one of the most important and exciting aspects of your design and Eagle Bay has worked hard to create a color collection that gives you plenty of choices. For the most accurate color representation, visit your local Eagle Bay Dealer to request a sample.

The colors below are made with Perma-vision™, a vibrant layer that ensures lasting color, minimizes stone particles and provides a smoother stone surface.

The colors below are made with Core-vision™, a "through and through" color process that provides natural and consistent tones throughout the stone.

Eagle Bay has attempted to represent our colors as accurately as possible, however variances will naturally occur as a result of the printing and manufacturing process. In all situations we recommend viewing the actual product before choosing a color and ordering product.

WALL COLORS

Eagle Bay wall colors are designed to blend in nicely with your surrounding landscape and complement the paver collections featured in this catalog. For the most accurate color representation, visit your local Eagle Bay Dealer to request a sample.

Eagle Bay has attempted to represent our colors as accurately as possible, however variances will naturally occur as a result of the printing and manufacturing process. In all situations we recommend viewing the actual product before choosing a color and ordering product.

HOW TO INSTALL HIGHLAND STONE® FIRE PIT KIT

I. FOUNDATION

RECOMMENDED BY EAGLE BAY — COMPACTED GRAVEL BASE:

Place and uniformly compact the gravel base (0- 3/4" crushed stone). Dense-graded aggregate base should be compacted using a vibratory plate compactor or hand tamper. A 4" thick gravel base is recommended and should extend beyond the Highland Stone® a minimum of 3" on each side. The top of the leveling pad should be at least 3" below grade.

CONCRETE BASE OR CONCRETE PAVERS: (Eagle Bay recommends a Compacted Gravel Base) Place Highland Stone® directly on a concrete base or concrete pavers. Make sure to fill the bottom of the fire pit with a layer of sand (3" minimum) to ensure proper drainage.

INSTALLING FIRST LAYER OF BLOCK: (A) Use a center stake and lay out the Highland Stone® in roughly a 22 1/2" radius from center stake to the back of the block. A circle with roughly a 45" inside diameter will require 10 medium and 12 small units. (B) It is important to double up the small units directly across from each other in order to attain the proper radius. Slight adjustment to the circle of blocks may be required for proper alignment.

2. BUILDING ADDITIONAL COURSES OF BLOCK

Make sure the first layer of block is perfectly leveled before building additional courses. Using concrete approved adhesive glue the second row of blocks to the first row. It is important to stagger the joints as much as possible on every course. Make sure not to line up the two small units on top of the others below. There are enough units to build 7 layers of block which would make the fire pit roughly 21" tall plus coping.

**For packaging, there are two extra of each unit provided in the kit.

3. INSTALLATION OF WEATHERED CAP & OPTIONAL METAL FIRE RING

Once the fire pit is at the desired height, use a concrete adhesive to secure the four radius cap units. Add crushed stone or lava rock to raise the fire bed up to preferred height. If you choose the optional metal fire ring, please insert before capping the fire pit.

Safety Tips:

- The fire pit is for outdoor use only.
- Make sure to assemble the fire pit a minimum distance from surrounding structures and make sure nothing is directly above the fire pit that is a potential fire and/or injury hazard.
- Before beginning installation, please contact your municipality to obtain information for fire pit installation regulations. It is very important to check local codes!!

View more installation details along with time lapse video on our website: eaglebayusa.com.

HOW TO INSTALL A PATIO USING PAVERS

IF YOU WANT TO EXPAND YOUR INDOOR ROOMS TO THE GREAT OUTDOORS — where you can enjoy space to dine, entertain, or just relax, consider installing a patio. Anyone can install a patio, but because there is lifting, hauling, digging, and cutting involved, it is important to wear work gloves, knee pads, a back support belt, safety glasses, and ear plugs as well as to practice proper lifting techniques.

DESIGNING AND INSTALLING YOUR OWN PATIO CAN BE COMPLETED IN SEVEN STEPS:

PAVER SELECTION AND PROJECT ESTIMATION

1. Determine the area to be paved and how much material will be needed. Choose paver shape and pattern. Estimate quantity for paved area.

SITE ANALYSIS AND PREPARATION

2. Have utilities marked and excavate area to be paved. The heavier the surface load, the deeper the base excavation. Be sure you have plans for relocating the soil and sod. Compact exposed base area.

3. Install geotextile and base aggregates. Turn cloth up at sides of base. Place aggregates over cloth to required depth and compact to 95% solid. Set posts and stringlines for final base grades and finished paver elevations.

LAYOUT AND INSTALLATION

4. Install C-33 concrete bedding sand and screed smooth for setting pavers to finished elevation. Install C-33 concrete bedding sand at a depth of 1" and screed smooth for setting pavers to finished elevation.
5. Place pavers on screeded sand setting bed. Use stringlines to keep pattern straight. Set hand-tight joints. Cut pavers in areas as needed to complete pattern.
6. Set plastic edging tight against all exposed paver edges and spike firmly every 24" for walkways and 12" for driveways and curves. Edging works best if set on an aggregate base after trimming sand, setting bed flush with outside edge of pavers.

7. Sweep dry C-33 concrete sand or other selected joint material into all joints, and compact to complete interlock process. Refill to desired level after early weathering. Sweep up, clean up, and enjoy your new paver installation to : Make one pass over entire area with a plate compactor, then sweep dry C-33 concrete sand or other selected joint material into all joints, then compact again to complete interlock process. Refill to desired level after early weathering. Sweep up, clean up, and enjoy your new paver installation.

NOTE: THICKNESS OF AGGREGATE BASE WILL VARY WITH SUBGRADE CONDITIONS AND CLIMATE. COLDER CLIMATES MAY REQUIRE THICKER BASES.

NOTE: Eagle Bay pavers with dimpled or textured surfaces—EpicStone, GrandCay, CircleStone, SF Rima™, CottageStone and Essex™ Stone—have high and low points on the surface which lend a more naturally aesthetic appeal to the pavers. However, pavers with textured surfaces are susceptible to surface scuffing when being compacted in place with plate compactors. Therefore, these paver types should always be compacted with plate compactors that incorporate a protective mat or other medium between the plate compactor and the surface of Eagle Bay pavers. This system will help to ensure that paver surface scuffing is kept to a minimum. These protective mediums include: rubber matting, thin carpet, Mirafi 500X, or cardboard. Manufacturers of plate compactors are able to recommend other products that can be used for this purpose. For further information on interlocking concrete paver details, technical information and recommended construction practices, visit ICPI (Interlocking Concrete Pavement Institute) at www.icpi.org.

Efflorescence is a whitish, powder-like deposit, which can appear on the surface of concrete pavers. When cement hydrates, a significant amount of calcium hydroxide is formed. A reaction occurs between the calcium hydroxide and carbon dioxide (from the air) to form water insoluble calcium carbonate, then called efflorescence. Efflorescence does not affect the structural performance or durability of concrete pavers. Eagle Bay includes admixtures in their concrete pavers to help minimize efflorescence, but efflorescence is a natural occurrence in all concrete products. Eagle Bay does not warrant concrete pavers that it manufactures against the appearance of efflorescence. Efflorescence may appear immediately or within months following installation. It may remain for months and some of it may wear away. Deposits may be removed from the concrete paver surface by using proprietary efflorescence removers. Before purchasing or applying any chemicals to remove deposits, please consult with a chemical company which specializes in efflorescence removal chemicals.

GUIDELINES FOR USING DEICING CHEMICALS ON UNIT PAVERS: The following guidelines can help limit the exposure of deicing chemicals while maintaining a safe environment:

- Limit the use of deicing chemicals by combining them with a traction aid such as sand.
- Do not over apply deicing chemicals; follow the recommended dosage.
- Do not use deicing chemicals in place of snow removal, but reserve them for melting ice formed by freezing precipitation or freezing snow melt.
- When using magnesium-based deicing chemicals, ensure the pavement is thoroughly washed in the spring as these deicers will continue to chemically degrade all types of concrete pavement throughout the year.
- Protect vegetation and metal from contact with deicing chemicals as most can impair vegetation and corrode metals.

In addition, use ICPI recommended sand jointing materials to minimize water penetration into the pavers. This will also help keep salts from entering and accumulating in the jointing and bedding sand that can eventually degrade the pavers. ICPI also recommends adequate pavement slopes (typically a minimum of 2%) to facilitate surface water drainage and to help remove deicing materials. While not essential, reduction of water entering jointing sand can be further enhanced with joint sand stabilization materials and/or sealers.

HOW TO INSTALL A RETAINING WALL

QUICK COURSE ON COURSES

To complete your project, you will need the following hand tools: shovel, tape measure, hammer, chisel, carpenter's level, stakes, string line, garden hose, safety glasses, gloves, pencil, and square. You may also need a skid loader, compactor, wheelbarrow, and a circular cut-off saw with a masonry blade. Other requirements include a 4" diameter flexible polypropylene pipe (drain tile), a supply of sand and gravel (3/4" or smaller aggregate with fines) for the base, and gravel (3/4" free-draining aggregate without fines) to use as backfill.

NOTE: Efflorescence is a whitish, powder-like deposit, which can appear on the surface of concrete retaining walls. When cement hydrates, a significant amount of calcium hydroxide is formed. A reaction occurs between the calcium hydroxide and carbon dioxide (from the air) to form water insoluble calcium carbonate, then called efflorescence. Efflorescence does not affect the structural performance or durability of concrete retaining walls. Eagle Bay includes admixtures in their concrete retaining walls to help minimize efflorescence, but efflorescence is a natural occurrence in all concrete products. Eagle Bay does not warrant concrete retaining walls that it manufactures against the appearance of efflorescence. Efflorescence may appear immediately or within months following installation. It may remain for months and some of it may wear away. Deposits may be removed from the concrete retaining wall surface by using proprietary efflorescence removers. Before purchasing or applying any chemicals to remove deposits, please consult with a chemical company which specializes in efflorescence removal chemicals. That way it mimic's exactly what is said in previous how to section.

DIRECTIONS:

1. Using a shovel or a skid loader, dig a trench about 24" wide and deep enough to fit the required amount of buried block and compacted base. For walls 4' high and under, bury one course of units. For walls taller than 4', consult a qualified engineer for design information. Total wall height includes the height of any buried courses.
2. Firmly compact the soil in the bottom of the trench. Lay 6" of compactible base (sand and gravel) in the bottom of the trench and compact (Fig. A).
3. Place the first layer of Anchor™ units without lips on the prepared base (lips must be manually knocked off units before placement) (Fig. B). Position the units side by side in full contact with the base. Level in both directions using your carpenter's level to Level front to back and side to side.
4. Continue assembling additional courses by placing units in a staggered relationship to the course beneath (running bond), pulling each unit forward until secure (Fig. C). NOTE: Use gravel (free-draining aggregate) to backfill each additional course as it is installed.
5. Place drain tile behind the wall at grade to allow water to drain from the backfill (Fig. D). Outlet the drain tile through the wall at every low point, or every 50' of wall length and around the ends of the wall. Backfill with free-draining gravel 12" behind the wall. Fill in the voids. Organic soil or clay-type soil is not recommended for backfill material.
6. Fill any remaining areas behind the wall with soil (Fig. E). Compact every 8". Repeat steps 4, 5, 6 until the wall reaches the desired height. For walls taller than 4', consult a qualified engineer for information concerning proper design, backfill, and geosynthetic reinforcement.
7. Firmly compact native soil behind the wall (Fig. F). Do not compact directly on top of the units.
8. You may need partial blocks. To split a block, use a hammer and chisel to score the block on all sides. Pound the chisel on the score line until the block splits. If the block does not split easily, you may need to use a circular cut-off saw with a masonry blade. Read and understand the operating manual before using a saw. Always wear eye protection when splitting blocks.

Refer to the Estimating and Installation Manual for instructions on installing freestanding walls and special applications. Copies are available at authorized Eagle Bay dealers.

NEXT STEPS

FIND AN EAGLE BAY DEALER NEAR YOU OR REQUEST AN EAGLE BAY CONSULTATION: EAGLEBAYUSA.COM

Our goal is to make this process as easy as possible! Once you have an idea or vision in place, visit eaglebayusa.com to look up a local dealer or to request a project consultation from an Eagle Bay representative. By contacting your local dealer you'll be able to view product samples, compare product costs, and learn about qualified designers, contractors, or installers in your area.

LIFETIME TRANSFERABLE WARRANTY

WE STAND BEHIND OUR PRODUCTS WITH A LIFETIME PRODUCT WARRANTY.

Eagle Bay is proud to certify that our paving stones and retaining walls meet the latest industry standards in the United States. All Eagle Bay manufactured hardscape products comply with and surpass all applicable standards set by the ASTM (American Society for Testing and Materials) and NCMA (National Concrete Masonry Association).

Eagle Bay offers a transferable lifetime warranty on the structural integrity of all paving stones and retaining wall units it manufactures. It covers any disintegration and/or decomposition of the above

mentioned products resulting from natural causes and the abnormal deterioration of the surface due to the use of sodium chloride (NaCl) such as de-icing salt. If products prove defective we will replace these units. Eagle Bay's responsibility is limited to its manufactured products only and not to costs related to the installation of those products. We will honor this transferable warranty with a proof of purchase (invoice or delivery slip).

Visit www.eaglebayusa.com for full warranty information.

DETAILS

PRINTED COLOR SWATCHES

The natural materials that we use in our paving stones and retaining wall products deliver a range of colors that closely match color samples in catalogues, spec books, color swatch books and online photos. However, Eagle Bay cannot guarantee specific color matching. Our pavers and wall can vary slightly in color batch depending on environmental conditions. Therefore, colors shown are approximate representations of standard colors and shouldn't be expected to be an exact match. Final color selection should be made at your local dealer from stock product. Eagle Bay always recommends immediately verifying the product and color upon receipt. If there are any discrepancies, contact your local dealer before continuing your project. Installation of the product constitutes its acceptance.

EFFLORESCENCE

This warranty does not apply to efflorescence. Efflorescence is a whitish powder-like deposit which can appear on the surface of concrete pavers. When cement hydrates, a significant amount of calcium hydroxide is formed. A reaction occurs between the calcium hydroxide and carbon dioxide (from the air) to form water insoluble calcium carbonate, then called efflorescence. Efflorescence does not affect the structural performance or durability of concrete pavers. Eagle Bay includes admixtures in their concrete pavers to help minimize efflorescence, but efflorescence is a natural occurrence in all concrete products. Eagle Bay does not warrant concrete pavers that it manufactures against the appearance of efflorescence. Efflorescence may appear immediately or within months following installation. It may remain for months and some of it may wear away. Deposits may be removed from the concrete paver surface by using proprietary efflorescence removers. Before purchasing or applying any chemicals to remove deposits, please consult your local Eagle Bay dealer for efflorescence removal chemicals.

COMPACTOR AND SNOW REMOVAL

Eagle Bay pavers with dimpled or textured surfaces – EpicStone, GrandCay, CircleStone, SF Rima™, CottageStone and EssexStone – have high and low points on the surface which lend a more naturally aesthetic appeal to the pavers. However, pavers with textured surfaces are susceptible to surface scuffing when being compacted in place with plate compactors. Therefore, these paver types should always be compacted with plate compactors that incorporate a protective mat or other medium between the plate compactor and the surface of Eagle Bay pavers. This system will help to ensure that paver surface scuffing is kept to a minimum. These protective mediums include: rubber matting, thin carpet, Mirafi 500X or cardboard. Manufacturers of plate compactors are able to recommend other products that can be used for this purpose. For further information on interlocking concrete paver details, technical information and recommended construction practices, visit ICPI (Interlocking Concrete Pavement Institute) at www.icpi.org.

Also snow removal equipment should have the proper spacing, bumpers, and rubber blade guards to protect the surface of the pavers. Eagle Bay will not be held responsible for damage caused by the misuse of compaction or snow removal equipment, leaving scuff marks, or burns on pavers.

NOTE:

This warranty does not apply to any breakage, chipping, or other deterioration that were caused from improper design or installation which does not comply with applicable codes, the ICPI (Interlocking Concrete Pavement Institute), NCMA (National Concrete Masonry Association) and recognized work procedures. Please visit www.icpi.org or www.ncma.org for more information on installation specifications. This warranty does not apply to any damage resulting from a natural disaster or from a deliberate and/or negligible act on the part of the purchaser, owner of the building, installer or any third party.
